Journal of Fermentation and Bioengineering

CONTENTS
VOLUME 69 • 1990

ORIGINALS

Suppressive Effect of *Bacillus subtilis* and It's Products on Phytopathogenic Microorganisms. Chae Gun Phae, Makoto Shoda, and Hiroshi Kubota 1- 7

Recovery and Fractionation of the Extracellular Degradative Enzymes from *Lentinula edodes* Cultures Cultivated on a Solid Lignocellulosic Substrate. Chittra Mishra and Gary F. Leatham 8- 15

Characterization of Thermostable Invertase from Wine Grapes. Kotoyoshi Nakanishi and Koki Yokotsuka 16- 22

The Enzymatic Acyl Exchange of Phospholipids with Lipases. Takashi Yagi, Taisuke Nakanishi, Yasuko Yoshizawa, and Fumio Fukui 23- 25

Light-Dependent Porphyrin Production by Suspended and Immobilized Cells of *Rhodobacter sphaeroides.* Kazuo Ishii, Akira Hiraishi, Takaaki Arai, and Hiroshi Kitamura 26- 32

Production of Ethanol in Repeated-Batch Fermentation with Membrane-Type Bioreactor. Takaaki Watanabe, Toshihiro Aoki, Hiroyuki Honda, Masahito Taya, and Takeshi Kobayashi 33- 38

Continuous High-Ethanol Fermentation from Cane Molasses by a Flocculating Yeast. Kenji Kida, Shin-ichi Asano, Motozumi Yamadaki, Kouichi Iwasaki, Takatoshi Yamaguchi, and Yorikazu Sonoda 39- 45

Influence of Age of Mycelium and Water Activity of the Medium on Aroma Production by *Trichoderma viride* Grown on Solid Substrate. Patrick Gervais and Martine Sarrette 46- 50

A New Way of Stabilizing Recombinant Plasmids. Hisao Sakoda and Tadayuki Imanaka 75- 78

Unusual Fructose Utilization by *Pichia stipitis* and Its Potential Application. Hung Lee and Barbara G. Fisher 79- 82

Stimulatory Effects of Certain Amino Compounds, Antibiotics, and Polyamines on Production of Alkaline Phosphatase by *Aeromonas liquefaciens.* Yoko Ikura 83- 88

Production of Alkaline Protease by *Bacillus licheniformis* in an Aqueous Two-Phase System. Yong Hee Lee and Ho Nam Chang 89- 92

Kissiris: A Mineral Support for the Promotion of Ethanol Fermentation by *Saccharomyces cerevisiae.* Theodoros Tsoutsas, Maria Kanellaki, Costas Psarianos, Argiris Kalliafas, and Athanassios A. Koutinas 93- 97

Characterization and Optimization of a New Immobilized System of κ-Carrageenan through Interaction with Carob Bean Gum and Polyols. Lidia T. Casas, Fernando Dominguez, and Edmundo Brito 98-101

Continuous Production of Acetic Acid Using Immobilized *Acetobacter aceti* in a Three-Phase Fluidized Bed Bioreactor. Yan Sun and Shintaro Furusaki 102-110

Properties of Extracellular Polymer Having an Effect on Expression of Activated Sludge. Sang-Mo Kang, Michimasa Kishimoto, Suteaki Shioya, Toshiomi Yoshida, and Ken-ichi Suga 111-116

Dewatering of Extracellular Polymer and Activated Sludges by Thermochemical Treatment. Sang-Mo Kang, Michimasa Kishimoto, Suteaki Shioya, Toshiomi Yoshida, and Ken-ichi Suga 117–121

Isolation of *Sphaerotilus natans*-Lysing Microorganism from Activated Sludge. Rikiya Takahashi, Akihiko Hattori, Toshiki Inoue, Kouichi Ogiwara, Masaharu Suzuki, and Hitoshi Yoneyama 143–147

Measurement of Low Molecular Weight Tannins: Indicators of Methanogenic Toxic Tannins. James Field, Gatze Lettinga, and Leo H. A. Habets 148–153

Gene Cloning, Purification and Characterization of Thermostable Alanine Dehydrogenase of *Bacillus stearothermophilus*. Yonekazu Sakamoto, Shinji Nagata, Nobuyoshi Esaki, Hidehiko Tanaka, and Kenji Soda 154–158

Maximizing the Expression of Recombinant Proteins in *Escherichia coli* by Manipulation of Culture Conditions. Enrique Galindo, Francisco Bolivar, and Rodolfo Quintero 159–165

Continuous Production of 4-Ethylguaiacol by Immobilized Cells of Salt-Tolerant *Candida versatilis* in an Airlift Reactor. Takashi Hamada, Misao Sugishita, and Hiroshi Motai 166–169

Batch Culture of *Alcaligenes eutrophus* ATCC 17697^T Using Recycled Gas Closed Circuit Culture System. Ayaaki Ishizaki and Kenji Tanaka 170–174

Hollow Fiber Bioreactors with Internal Aeration Circuits. Bong Hyun Chung and Ho Nam Chang 175–177

Membrane Bioreactors for the Evaluation of Maintenance Phenomena in Wastewater Treatment. Pascale Bouillot, Angel Canales, Alain Pareilleux, Alain Huyard, and Gérard Goma 178–183

Cloning and Expression in *Escherichia coli* of the *Ban*I and *Ban*III Restriction-Modification Systems from *Bacillus aneurinolyticus*. Yoshihiko Maekawa and Bunsei Kawakami 195–198

Gene Cloning, Purification, and Characterization of the Highly Thermostable Leucine Dehydrogenase of *Bacillus* sp. Shinji Nagata, Haruo Misono, Susumu Nagasaki, Nobuyoshi Esaki, Hidehiko Tanaka, and Kenji Soda 199–203

Characteristics of Thermostable Pullulanase from *Bacillus stearothermophilus* and the Nucleotide Sequence of the Gene. Takashi Kuriki, Jong-Hyun Park, and Tadayuki Imanaka 204–210

Properties of Aldose Reductase from the Methanol Yeast *Candida boidinii*. Paul L. Bolen and Derek A. Mccracken 211–214

Factors Affecting Conjugative Transfer Rates of Plasmids in Batch and Continuous Cultures. Pei-Xin Yao, Hisao Ohtake, and Kiyoshi Toda 215–219

Reductive Transformation of Benzoate by *Nocardia asteroides* and *Hormoconis resinae*. Nobuo Kato, Hisatoshi Konishi, Muneto Masuda, Eun-Ho Joung, Masayuki Shimao, and Chikahiro Sakazawa 220–223

Involvement of Ca^{2+} in the Flocculation of *Kluyvera cryocrescens* KA-103. Kazuo Kakii, Motomitsu Hasumi, Takashi Shirakashi, and Mitsuo Kuriyama 224–227

Continuous Ethanol Production from Raw Starch Using a Reversibly Soluble-Autoprecipitating Amylase and Flocculating Yeast Cells. Kazuhiro Hoshino, Masayuki Taniguchi, Hideji Marumoto, and Michihiro Fujii 228–233

Fermentative Ability of *Zymomonas mobilis* under Various Oxygen Supply Conditions in Batch Culture. Hideo Tanaka, Hidenori Ishikawa, Koichi Osuga, and Yoshinori Takagi 234–239

Enzymatic Hydrolysis of Soluble Starch in a Polyethylene Glycol-Dextran Aqueous Two-Phase System. Kazuhiko Hayashida, Koji Kunimoto, Fumihide Shiraishi, Koei Kawakami, and Yasuhiko Arai 240–243

A New Dialysis Fermentor for the Production of High Concentrations of Extracellular Enzymes. Herbert Märkl, Max Lechner, and Fritz Götz 244-249
Potassium Removal Accompanied by Enhanced Biological Phosphate Removal. Hiroshi Imai and Kazuo Endoh 250-255
Biochemical Characterization of an L-Methionine-Enriched Mutant of a Methylotrophic Yeast, *Candida boidinii*. Wang-Jin Lim, Yoshiki Tani, and Han-Chul Yang 271-275
Biomethanation of Spent Wash: Heavy Metal Inhibition of Methanogenesis in Synthetic Medium. Ratna Nandan, Vikas Tondwalkar, and Prasanta Kumar Ray 276-281
Expression of a Thermostable Cellulase Gene from a Thermophilic Anaerobe in *Saccharomyces cerevisiae*. Takao Saito, Tohru Suzuki, Akihiro Hayashi, Hiroyuki Honda, Masahito Taya, Shinji Iijima, and Takeshi Kobayashi 282-286
The Role of NADH : Fe(III)EDTA Oxidoreductase in Ethylene Formation from 2-Keto-4-Methylthiobutyrate. Takahira Ogawa, Masaya Takahashi, Takao Fujii, Masato Tazaki, and Hideo Fukuda 287-291
Phenomenological Background and Some Preliminary Trials of Automated Substrate Supply in pH-Stat Model Fed-Batch Culture Using a Setpoint of High Limit. Takahiro Suzuki, Tsuneo Yamane, and Shoichi Shimizu 292-297
Effective Purification of Bioproducts by Fast Flow Affinity Chromatography. Yoshihiro Kamiya, Tsuyoshi Majima, Yoshinori Sohma, Shigeo Katoh, and Eizo Sada 298-301
Cloning and Expression in *Escherichia coli* of the Glutamate Dehydrogenase Gene, *gdh*, from *Corynebacterium melassecola*. Yasuhiko Takeda, Yukihiro Nakajyoh, and Sadao Isshiki 317-321
A System for Temperature-Controlled Expression of a Foreign Gene with Dual Mode in *Saccharomyces cerevisiae*. Hikari Kobayashi, Nobushige Nakazawa, Satoshi Harashima, and Yasuji Oshima 322-327
Extraction of Anthocyanins from Muscat Bailey A Grape Skins. Koki Yokotsuka and Nakako Nishino 328-334
Microbial Spermidine Dehydrogenase: Purification and Properties of the Enzyme in *Pseudomonas aeruginosa* and *Citrobacter freundii*. Tomohiro Hisano, Shiro Abe, Michio Wakashiro, Akira Kimura, and Kousaku Murata 335-340
Purification and Characterization of Alkane Solubilizing Factor Produced by *Pseudomonas* PG-1. Swaranjit S. Cameotra and Hugo D. Singh 341-344
Utilization of Unhydrolyzed Cheese Whey for the Production of Extracellular Polysaccharide by *Xanthomonas cucurbitae* PCSIR B-52. Shahjahan Baig, M. Abdul Qadeer, M. Saeed Akhtar, and Tahseen Ahmed 345-349
Formation of Inclusion Complexes between Cyclodextrins and Aromatic Compounds under Pressurized Carbon Dioxide. Masamichi Kamihira, Taro Asai, Yoshikazu Yamagata, Masayuki Taniguchi, and Takeshi Kobayashi 350-353
Support Media for Microbial Adhesion in an Anaerobic Fluidized-Bed Reactor. Kenji Kida, Sigeru Morimura, Yorikazu Sonoda, Masaaki Obe, and Tatsuro Kondo 354-359

NOTES

Autopolyploid Formation of *Trichoderma reesei* QM9414 by Colchicine Treatment. Hideo Toyama and Nobuo Toyama 51- 53
Characterization of a Phenanthrene Degradation Plasmid from *Alcaligenes faecalis* AFK2. Hohzoh Kiyohara, Noboru Takizawa, Hitoshi Date, Shin Torigoe, and Keiji Yano 54- 56
The Relaxation of Specificity of *Ban*I Restriction Endonuclease from *Bacillus aneurinolyticus* IAM 1077. Yoshihiko Maekawa and Bunsei Kawakami 57- 59
Isolation and Characterization of Restriction Endonucleases from *Acidiphilium* sp. 16R and 22M. Kenji Inagaki, Dexian Dou, Keiko Kita, Nobutsugu Hiraoka, Noriaki

Kishimoto, Tsuyoshi Sugio, and Tatsuo Tano 60- 62
Cloning of Genes for Spermine Resistance in *Saccharomyces cerevisiae* and Their Effects on *S*-Adenosyl-L-Methionine Accumulation. Naofumi Shiomi, Hideki Fukuda, Yasuki Fukuda, Kousaku Murata, and Akira Kimura 63- 66
Effects of Oxygen Stress on Chromate Reduction in *Enterobacter cloacae* Strain HOl. Koya Komori, Kiyoshi Toda, and Hisao Ohtake 67- 69
Estimation of the Growth Rate of *Pleurotus* on Stacked Straw. José F. Calzada and Carlos Rolz 70- 71
Pilot-Scale Citric Acid Production with *Aspergillus niger* under Several Conditions. Ghulam N. Qazi, Chand N. Gaind, Surya K. Chaturvedi, Charanjit L. Chopra, Michael Trager, and Ulfert Onken 72- 74
Utilization of Aromatic Compounds by *Trichosporon cutaneum* KUY-6A. Yoshie Hasegawa, Toshikatsu Okamoto, Hitoshi Obata, and Tai Tokuyama 122-124
Mutants of *Saccharomyces cerevisiae* Producing a Large Quantity of β-Phenethyl Alcohol and β-Phenethyl Acetate. Osamu Akita, Tetsuro Ida, Takazi Obata, and Syodo Hara 125-128
Purification and Properties of a Low-Molecular-Weight α-Mannosidase from *Cellulomonas* sp. Kaoru Takegawa, Satoshi Miki, Takayuki Jikibara, and Shojiro Iwahara 129-131
Application of the Freeze-Blast Method to Disruption of Cultured Plant Cells. Yoshiyuki Omori, Masanori Tsumura, Taizo Ichida, Hiroki Nakajima, Mitsuyoshi Ueda, Fumihiko Sato, Yasuyuki Yamada, and Atsuo Tanaka 132-134
Difussion Coefficients of Carbohydrates in Modified κ-Carrageenan Gels with and without *Escherichia coli* Immobilized. Edmundo Brito, José Don Juan, Fernando Dominguez, and Lidia T. Casas 135-137
Treatment of Distillery Wastewater Discharged from Beet Molasses-Spirits Production Using Yeast. Kazuhito Moriya, Haruyuki Iefuji, Hitoshi Shimoi, Shun-ichi Sato, and Makoto Tadenuma 138-140
Frequent Occurrence of Diploid a or α Sporogenous Mater Cells and Construction of Ploidy Series in the *Sake* Yeast Kyokai No. 9. Yoshinobu Tani, Yukio Tomohiro, Akira Miyata, and Shinsaku Hayashida 184-185
Protoplast Fusion between *Aspergillus oryzae* and *Aspergillus niger* in Relation to Their Multinuclear Nature. Hideo Toyama and Nobuo Toyama 186-188
Continuous Conversion of Glutamine to Glutamate by Immobilized Glutaminase-Producing Yeast. Yaichi Fukushima and Hiroshi Motai 189-191
Symbiotic Formation of Alginate Lyase in Mixed Culture of Bacteria Isolated from Soil. Yoshitsugu Kaneko, Yoshimasa Yonemoto, Kenichi Okayama, Akira Kimura, and Kousaku Murata 192-194
Enzymatic Production of Tryptophan Using a Lipoic Acid and Thiamine Double Auxotroph of *Enterobacter aerogenes* Having Both Pyruvic Acid Productivity and High Tryptophanase Activity. Shigeru Oita, Atsushi Yokota, and Shoichi Takao 256-258
Penicillin Hydrolysis Rate: Its Effect on the Kinetics of Penicillin Fermentation. S. John Pirt 259-260
Kinetic Modelling of Isomerization and Anaerobic Degradation of *n*- and *i*-Butyrate. Abilio Aguilar, Carles Casas, Javier Lafuente, and Juan M. Lema 261-264
The Inverse Fluidized Bed Biofilm Reactor: A New Laboratory Scale Apparatus for Biofilm Research. Ludmil N. Nikolov and Dimitar G. Karamanev 265-267
Biomethanation of Spent Wash: Bacterial Pretreatment to Remove Heavy Metals by Adsorption. Vikas Tondwalkar, Ratna Nandan, Shakeel Ahmed, and Prasanta Kumar Ray 302-304

Biological Threshold Values of Procaryotic Gene Expression Which Is Controlled by the DNA Inverted Repeat Sequence and the mRNA Secondary Structure. Motoki Kubo, Yuji Higo, and Tadayuki Imanaka 305-307

Reduction of Pollutant Parameters of Leaf Protein Concentrate By-Product by Microbial Fementation. Sunanda Chanda, Sibani Chakrabarti, and Shyam Matai 308-310

Effects of Oxygen Aeration on Production of Monoclonal Antibody in Immobilized Hybridoma-Cell Bioreactor. Masamichi Kamihira, Hitoshi Yoshida, Shinji Iijima, and Takeshi Kobayashi 311-312

A Simple Method for Estimating the Average Concentration of Dissolved Oxygen in a Fermentor by Exist Gas Analysis. Hideo Eiki and Takashi Osono 313-316

Inhibition of Restriction Endonucleases by Commercial Polysaccharides. Kunio Oishi, Shuichi Aoi, Yoko Ehara, Yumiko Otsuka, Kimiko Shimamura, Yukari Higuchi, and Masao Nomoto 360-361

Purification of Staphylococcal Protein A by Affinity Precipitation: Dissociation of Protein A from the Adsorbent with Chemical Reagents. Masayuki Taniguchi, Seiichi Tanahashi, and Michihiro Fujii 362-364

Bacterial Reduction of Toxic Hexavalent Chromium Using a Fed-Batch Culture of *Enterobacter cloacae* Strain HO1. Eiji Fujii, Kiyoshi Toda, and Hisao Ohtake 365-367

Capacity for Polyphosphate Accumulation of Predominant Bacteria in Activated Sludge Showing Enhanced Phosphate Removal. Akira Hiraishi and Yoshiaki Morishima... 368-371
